Rakshith Chandra Shekar

SAP ABAP Cloud / BTP Developer | Computing Student

rakshithc46@gmail.com | +61 478 086 899 | Sydney, NSW | linkedin.com/in/rakshithc46 | github.com/rakshithc4

International student (Subclass 500) · Available full-time December 2026 – February 2027

Portfolio & live demos: rakshithchandrashekar.com | assetpulse-psi.vercel.app | procureflow-alpha.vercel.app

Summary

Computing student at the University of Sydney (Bachelor of Advanced Computing, graduating December 2027) who builds and ships SAP ABAP Cloud applications on SAP BTP with live demos, alongside full-stack Python and Next.js tooling and a deep learning pipeline. Tested, documented on GitHub, and explained clearly to non-technical audiences. Seeking a Sydney summer internship in SAP development or consulting.

Projects

AssetPulse: Asset Maintenance Management System | Mining sector, personal project | *2026*

Stack: **SAP ABAP Cloud (RAP) / SAP BTP / Python (FastAPI) / Next.js / TypeScript / Vercel / Render**

- Built a full-stack maintenance system, modelled on SAP Plant Maintenance, that takes a fault from report to completed work order: 3 RAP managed business objects, 6 actions with cross-object status logic, and an OData V4 service behind a CSRF-aware proxy.
- Python analytics service and role-based UI for MTTR, availability % and backlog aging; 12/12 ABAP Unit tests, 0 ATC errors and 80 web and analytics tests in CI. Hosted demo uses sample data.

ProcureFlow: SAP ABAP Cloud Procurement Workflow | Personal project | *2025*

Stack: **SAP ABAP Cloud (RAP) / SAP BTP / OData V4 / Next.js / Vercel**

- Built an end-to-end procurement workflow on SAP BTP where employees raise requisitions, managers approve or reject, and approved requests become purchase orders: 17 activated objects, 4 custom RAP actions.
- Designed a server-side proxy that handles CSRF tokens and session cookies between Next.js and SAP BTP, and a RAP managed business object in strict(2) mode; verified with 6/6 ABAP Unit tests, a clean ATC scan and Playwright end-to-end tests.

Brain Tumour Classification: Multi-Model CNN Pipeline | Co-authored | *2024*

Stack: **Python / TensorFlow/Keras / scikit-learn / OpenCV / ResNet50V2 / InceptionV3 / VGG16**

- Benchmarked 4 CNN architectures (3 ImageNet transfer-learning models and a custom residual network with attention and focal loss) on 7,023 MRI scans across 4 tumour classes; ResNet50V2 reached 95.5% test accuracy (F1 0.95).

Technical Skills

SAP: SAP BTP ABAP Cloud, RAP, CDS views, OData V4, Fiori, ABAP Unit, ATC, abapGit
Languages: Python, TypeScript, Java, C/C++, SQL, R, ABAP
Software & Cloud: Next.js, React, FastAPI, Git, GitHub Actions CI, pytest, Playwright, Vercel, Render, Agile/Scrum
AI & Data: CNNs, transfer learning, TensorFlow/Keras, scikit-learn, Grad-CAM, AI-assisted development (Claude Code)
Office: Microsoft Office (Excel, PowerPoint)

Experience

Guest Relations Representative | BridgeClimb, Sydney, NSW | *Jul 2026 – Present*

- Serve international guests face to face in a client-facing, safety-critical role, managing group logistics and communicating clearly under time pressure.

Peer Mentor | University of Sydney | *2025 – Present*

- Support new Computer Science students with academic guidance, translating technical concepts into clear, accessible explanations.

President, Student Council | Manipal Academy of Higher Education | *2022 – 2024*

- Led a 22-person committee delivering 17 campus events to 800+ students; coordinated budgets, vendors and cross-team logistics.

Education

Bachelor of Advanced Computing | University of Sydney (USYD) | *Expected December 2027*

- Majoring in Computer Science, minoring in Software Development. WAM: 76.

Certifications

SAP Learning credential: Positioning SAP Business Data Cloud (Apr 2026)
C_ABAPD_2507 SAP Certified Associate – Back-End Developer, ABAP Cloud (expected January 2027)

Languages

English (Fluent), Hindi (Fluent), Kannada (Native)
